

How to use Workzap, module by module

This guide follows the real screens of the live platform. It starts with the order to set things up in, then shows the main sales-to-cash flow, then covers each module: what it is for, where to find it, and what to do in order.

REVIEW

- ! Gaps to fix

A First-time setup

A new workspace should be set up in this order. Each step supplies data that later modules need. For example, quotes need customers and catalog items, and PI needs knowledge before it can answer customers.

#	DO THIS	WHERE	WHY IT COMES FIRST
1	Set business type, currency, tax, invoice due days, quote validity, max discount, approval threshold	/settings	Every new quote, order and invoice uses these defaults. Business type decides whether Inventory is shown.
2	Create branches, then departments	/settings/branches /settings/departments	HR employees and members are grouped by department.
3	Create roles, then add members	/settings/roles /settings/members	Permissions decide which modules each person sees in the sidebar.
4	Add categories and offerings with prices	/catalog/products/new	Quotes, orders and invoices pick their lines from the catalog.
5	Add customers	/customers/new	Every lead, quote, order and invoice belongs to a customer.
6	Connect storage, email and WhatsApp	/settings/integrations	S3 is needed for attachments. Email is needed for sending documents. WhatsApp is needed for PI.
7	Add PI knowledge, connect the WhatsApp number, turn on auto-replies	/pi/knowledge /pi/whatsapp /pi/settings	PI answers from your knowledge and catalog.
8	Add employees or send onboarding links	/hr/employees/new /hr/onboarding	Fills HR headcount and the employee reports.

B The main flow: sales to cash

Most modules are steps in one chain. A lead becomes a quote, an accepted quote becomes an order, a confirmed order becomes an invoice, and a payment closes the invoice. Reports read from every step.

This chain was verified on live data. QU0-000002 (Omar Farooq, \$8,075.00) went Draft → Approval (15% discount exceeded the 10% limit) → Sent → Accepted. It was linked to order ORD-000011 (Confirmed), which produced invoice INV-000001, paid in full by cash payment PAY-000001.

C Getting around

Sign in

1. Open `/login`, enter work email and password, press **Sign in**.
2. New businesses use `/register` (your name, business name, work email, password) and press **Create workspace**.

Top bar

- **Workspace switcher** (top left) changes business. **Create a workspace** adds another.
- **Production** pill switches environment (Production, staging, development data).
- **+ Create** is the shortcut for new records.
- Bell opens notifications. Avatar opens your account.

Finding things

- **Search...** or **Ctrl K** jumps to any record or page.
- List pages share one pattern: status tabs, search box, filters, **Columns**, row select, paging.
- The sidebar only shows modules your role can open.

01 Overview

/

This is the home screen after sign-in. Start each day here. It shows the business at a glance and what is waiting on your team.

What you see

- KPI tiles: revenue collected, orders this month, active customers, pending payments, outstanding invoices, inventory alerts, open quotes, employees.
- Revenue trend (invoiced vs collected, 12 months) and order activity (30 days). Each chart has a table view.
- PI today, recent activity and installed products.

Daily routine

1. Check **Needs attention**: quotes awaiting approval, overdue invoices, open PI handoffs, draft orders to confirm.
2. Click an item to open the filtered list and clear it.
3. Use **Quick actions** to add a customer, create a quote or order, record a payment, add a service or open the PI inbox.

Overview. Needs attention shows 10 draft orders waiting to be confirmed.

02 Customers / CRM

/customers

/customers/new

/customers/segments

This is the master record for everyone you sell to. Leads, quotes, orders, invoices and WhatsApp conversations all attach to a customer.

Add a customer

1. Customers > **Add customer**.
2. Enter **Full name** (required). Email, phone, company and tags are optional.
3. Press **Create customer**. PI can also create customers from WhatsApp (source = WhatsApp).

Work with a customer

1. Open a row to see the profile tabs: Overview, Activity, Orders, Quotes, Invoices, Conversations, Notes.
2. Use **Edit** to update details. **More customer actions** has archive and related actions.
3. Filter the list with the All, Active, WhatsApp, VIP and Archived tabs, or open **Segments** for built-in and tag segments.

active

archived

The screenshot displays the Workzap CRM interface. On the left is a dark sidebar with a search bar and a menu containing sections like WORKSPACE, CUSTOMERS / CRM, and ADMIN. The main content area is titled 'Customers / CRM > Usman Tariq'. At the top right of this area are buttons for 'Production', 'Create', and a notification bell. Below the title bar, the customer's name 'Usman Tariq' is shown with a status 'Active' and a 'Manual' tag. Action buttons for 'Create quote', 'Create order', 'Edit', and a menu are present. The interface features several tabs: Overview, Activity, Orders, Quotes, Invoices, Conversations, and Notes. The 'Overview' tab is active, showing a summary of key metrics: 1 Order (excluding cancelled), 0 Open quotes, an Outstanding balance of \$0.00, and 0 Open conversations on WhatsApp. Below these metrics is a 'Contact' section with fields for Name, Email, Phone, Company, Tags, Source, and Customer since. To the right of the contact details are sections for 'Recent orders', 'Recent quotes', and 'Recent invoices'. At the bottom, there are sections for 'PI conversations' and 'Attachments'.

Customer profile. One page for contact details, PI conversations, orders, quotes and invoices.

03 Catalog

/catalog

/catalog/products

/catalog/categories

/catalog/pricing

These are the services and products you sell. Quote, order and invoice lines come from here, and PI quotes prices from here.

Add an offering

1. Create categories first in **Categories > New category**.
2. **Services & offerings > Add offering**. Choose the type: service, product, hybrid or package.
3. Enter the name, an optional description, and a category.
4. **Visibility**: tick whether PI may show this offering to customers.
5. **Pricing options**: add one or more variants (SKU, name, price, currency) with **Add variant**.
6. Check the Review step, then press **Create offering**.

Maintain it

- On an offering page, use **Show to PI** / **hide**, **Deactivate** and **Edit**. The tabs are Overview, Variants and Related.
- **Pricing** lists every SKU price in one table, which is quick for price updates.
- The list filter **Hidden from PI** shows what the AI cannot offer.

Add offering form.

04 Sales

/sales

/sales/leads

/sales/pipeline

Tracks every opportunity before it becomes a quote. The Sales home shows open pipeline value and the leads PI captured.

Work a lead

1. Leads > **New lead**, or let PI capture one from a WhatsApp chat.
2. Open the lead. Fill in **Requirements** and anything in the **Missing info** column, then **Save notes**.
3. Move it forward with the **Next stages** buttons, e.g. **Move to proposal**.
4. At proposal, create a quote for the customer (step 05).
5. Close it as won, or use **Mark lost**. **Reopen as new** brings a lost lead back.

Pipeline board

- The board shows one column per stage. Each card has an actions menu.
- Lead sources: manual, PI, website, referral.

The screenshot shows the Workzap Sales Pipeline board. The left sidebar contains navigation options: Overview, Customers / CRM, Catalog, PI, Sales (selected), Quotes, Orders, Billing, Finance, HR, Reports, ADMIN, Settings, Users / Members, Roles & Permissions, Branches, Departments, Environments, Integrations, Audit Logs, and Platform Products. The main area displays the Pipeline board with five columns: New (3 leads, \$25K), Qualified (2 leads, \$11.4K), Proposal (2 leads, \$4.3K), Won (2 leads, \$8.2K), and Lost (1 lead, \$900). Each column contains cards for individual leads with details like company name, contact person, and value. A keyboard shortcut tip is visible at the bottom: 'Keyboard: open a card's menu (Tab to its button, then Enter) and choose "Move to...". Won is final and asks for confirmation.'

Pipeline board.

05 Quotes

/quotes

/quotes/new

/quotes/approvals

This is a priced proposal for a customer. The quote rules in Settings apply here: validity days, maximum discount and approval threshold. PI follows the same rules.

Create and send

1. Quotes > **New quote**. It is a 3-step wizard.
2. **Customer**: pick one. If the customer is new, use "Add them first".
3. **Items**: add catalog lines with quantity and discount.
4. **Review**: save it as a draft.
5. **Submit** the quote. If the discount is over the limit or the total is over the threshold, it goes to **Approvals**. Otherwise it is approved straight away.
6. An approver opens **Approvals** and approves or rejects it.
7. **Send** it to the customer, then record **Accept** or **Reject**.
8. On an accepted quote, **Convert to order**. The linked order then shows on the quote.

Statuses

- The Progress panel on the quote shows each step with a date and time.
- Drafts can be changed with **Edit** (`/quotes/:id/edit`).
- A quote past its **valid until** date can be marked expired.

- Draft Prepared
- Approval 25 Sep 2026, 17:13
- Sent to customer 25 Sep 2026, 17:13
- Accepted

Approval

Approved before sending.

• Discount of 15% exceeds the 10% limit

Approved 25 Sep 2026, 17:13

Linked order

ORD-000011 • Confirmed

Accepted quote. It shows the approval reason and the linked order.

06 Orders

/orders

/orders/new

/orders/fulfillment

This is what you have agreed to deliver. An order comes from an accepted quote, from PI, or is created by hand.

Create and deliver

1. Orders > **New order**: Customer → Items → Review.
It is saved as a **draft**.
2. Open the draft and **Confirm** it. For product businesses, confirming deducts stock.
3. If "Invoice automatically when an order is confirmed" is on in Settings, the invoice is issued now.
4. Open **Fulfillment**, a board with Confirmed, Processing, Shipped and Delivered columns.
5. Press **Start processing**, then Ship, then Deliver.

Statuses

or **cancelled**

- The order page shows the customer, the linked invoice, details and attachments.
More order actions has cancel and related actions.

Fulfillment board.

07 Billing

/billing

/billing/invoices

/billing/invoices/new

/billing/payments

Invoices and money received. The Billing home shows overdue invoices, receivables aging and recent payments.

Invoice and collect

1. Invoices come from confirmed orders. You can also use **New invoice**: bill to, line items, terms, then **Create draft**.
2. **Issue** the draft. The due date comes from "Invoice due (days)".
3. When money arrives, open the invoice and use **Record payment**. Choose the method (cash, bank transfer, card, mobile wallet or other) and enter the amount and a reference.
4. A part payment sets the invoice to partially paid. The full amount sets it to paid.
5. Use **Void** to cancel a wrong invoice. A payment recorded by mistake can also be voided.

Statuses

draft → issued → partially paid → paid
or void overdue (past due date)

- The invoice Timeline records every event. Payments lists all receipts across invoices.
- Attachments need S3 storage connected under Integrations.

The screenshot displays the Workzap Billing interface. On the left is a dark sidebar with a search bar and a menu including Overview, Customers / CRM, Catalog, PI, Sales, Quotes, Orders, Billing (highlighted), Finance, HR, Reports, and an ADMIN section with Settings, Users / Members, Roles & Permissions, Branches, Departments, Environments, Integrations, Audit Logs, and Platform Products. The main content area shows the invoice details for INV-000001, which is marked as 'Paid'. It includes a table for the bill to Omar Farooq, a summary table showing a balance due of \$0.00, and sections for Attachments, Summary, Payments (showing a cash payment of \$8,075.00), and a Timeline of events.

08 Finance

/finance

/finance/expenses

/finance/receivables

Money going out and money still owed to you.

Record an expense

1. Expenses › **Record expense**: date, category, description, vendor, amount.
2. Filter by category or search description or vendor.
3. Void an expense if it was entered by mistake (recorded → void).

Chase receivables

1. Open **Receivables**. Aging buckets are not yet due, 1–30, 31–60, 61–90 and 90+ days.
2. Work the open invoices list from most days overdue down.
3. Record payments in Billing. Receivables update automatically.

The screenshot shows the Workzap Finance overview dashboard. On the left is a dark sidebar with the Workzap logo and a search bar. Below the search bar is a 'WORKSPACE' section with links to Overview, Customers / CRM, Catalog, PI, Sales, Quotes, Orders, Billing, Finance (highlighted), HR, and Reports. Below that is an 'ADMIN' section with links to Settings, Users / Members, Roles & Permissions, Branches, Departments, Environments, Integrations, Audit Logs, and Platform Products. The main content area is titled 'Finance' and includes a subtitle 'Cash movement, receivables and spending for the period you choose.' and a '+ Record expense' button. There are tabs for 'Overview' (selected), 'Receivables', and 'Expenses'. A period selector shows '30 days' (selected), '90 days', and '12 months', with the date range '30 Aug 2026 – 28 Sep 2026'. Four summary cards are displayed: 'Cash in' (\$8,075.00, Payments received, last 30 days), 'Cash out' (\$0.00, Recorded expenses, last 30 days), 'Net cash' (\$8,075.00, Cash in minus cash out), and 'Receivables' (\$0.00, Open invoice balances today). Below these are two tables. The 'Expenses by category' table shows 'Recorded expenses, last 30 days' and a message 'No expenses recorded in this period.' The 'Receivables aging' table shows 'Open balances by days past due' with columns for Age, Invoices, and Balance. The table rows are: Not yet due (0 invoices, \$0.00), 1–30 days (0 invoices, \$0.00), 31–60 days (0 invoices, \$0.00), 61–90 days (0 invoices, \$0.00), 90+ days (0 invoices, \$0.00), and Total (0 invoices, \$0.00). A disclaimer at the bottom states: 'Operational finance, not a general ledger. These figures come from payments recorded on invoices and expenses recorded here. They show day-to-day cash movement; they are not double-entry accounts, and don't replace your accountant's books or tax filings.'

Total	0	\$0.00

Operational finance, not a general ledger
These figures come from payments recorded on invoices and expenses recorded here. They show day-to-day cash movement; they are not double-entry accounts, and don't replace your accountant's books or tax filings.

Finance overview. Switch between 30 days, 90 days and 12 months.

09 HR

[/hr](#) [/hr/employees](#) [/hr/departments](#) [/hr/onboarding](#)

Your people directory, departments and the self-service onboarding of new hires.

Onboard a new hire (recommended)

1. Onboarding > **Create onboarding link**, then **Send onboarding link** to the person.
2. They open `/onboarding/<token>` and fill in their own details. No login is needed.
3. Status shows “Awaiting employee” until they submit. The link expires after 7 days. Use **Revoke link** to cancel it.
4. Review the submission, then approve it or use **Reject submission**. Approving creates the employee.

Add directly

1. Employees > **Add employee**. Full name, job title, employment type and hire date are required.
2. Optional: work email, phone, department, manager, salary and currency.
3. Change status later with **Mark on leave** or **terminate**.

active ↔ on leave → terminated

10 PI, the AI WhatsApp assistant

/pi

/pi/inbox

/pi/agents

/pi/whatsapp

/pi/knowledge

/pi/handoffs

/pi/analytics

/pi/settings

PI answers customers on WhatsApp using your catalog and knowledge. It can capture leads and draft quotes and orders. When it needs a person, it hands the chat to your team.

1 • Connect WhatsApp

WhatsApp › **Connect number**. Enter the display name, phone number, phone number ID, business account ID and permanent access token from Meta. Check **Status** and **Events** (webhook log) until messages show up.

2 • Teach it

Knowledge › **New source** (e.g. your website) or **Add document**. Watch the **Ingestion** board (Pending → Processing → Ready / Failed). Only Ready documents are used for answers.

3 • Configure behaviour

Settings covers auto-replies, business hours, response rules (language, tone, length), AI model tiers, provider fallback (OpenAI → Gemini → Groq → handoff), tool permissions, handoff rules (keywords and a confidence threshold) and knowledge retrieval. Agents shows how a message is routed. Each agent has Instructions, Model & fallback, Tools, **Test run** and Versions with **Roll back**. Use **New configuration** for the 6-step wizard.

4 • Go live

Turn on **Auto-replies** in PI Settings. While they are paused, PI still receives messages and shows them in the inbox, but it does not reply.

5 • Run it every day

Inbox has filters for Open, Closed, AI, Human, Mine, Unassigned and Unread. Use **Take over this conversation** to reply yourself. **Handoffs** are chats PI escalated. Use **Assign to me**, reply, then **Resolve handoff**. **Analytics** covers conversations, agent runs and AI usage over 7, 30 or 90 days.

Current state on the live workspace: **WhatsApp not connected** and **auto-reply paused**. PI analytics show no activity yet. Steps 1 and 4 are still open.

PI settings. Each row opens its own settings page.

11 Reports

</reports></reports/revenue></reports/customers></reports/orders></reports/quotes></reports/billing></reports/employees></reports/pi>

Read-only numbers built from the other modules. There is nothing to enter here.

How to use

1. Pick a report from the Reports home.
2. Choose the range (e.g. 12 / 24 months for revenue, 30 / 90 / 365 days for orders).
3. Use "Show ... as table" to see the numbers. Use **Export CSV** for Excel or your accountant.

What each answers

- **Revenue:** invoiced vs collected, collection rate per month.
- **Customers:** new customers, top customers by invoiced amount.
- **Orders / Quotes:** counts and value by status.
- **Billing:** receivables aging, collections per month.
- **Employees:** headcount by department. **PI:** conversations.

Revenue report.

12 Business workflows

/workflows

Overview > Business workflows

Guided reviews and safe bulk actions on quotes, orders and invoices. You prepare an action, check the preview, then run it. Prepared actions expire if they are not run.

Prepare an action

1. Choose the record type: Quotes, Orders or Invoices.
2. Search the record number and choose the record, e.g. QU0-000001 · Ayesha Khan · Draft.
3. Pick one of the actions that are valid for its current status.
4. Press **Prepare review**, check the lines and total, then run it.

Review cards

- **Run review** is available on business overview, sales pipeline, quotes to review, revenue, finance summary, team headcount and business settings.
- **Your workflow history** lists past runs with their status.

The screenshot displays the 'Business workflows' section of the Workzap application. On the left is a dark sidebar with navigation links for 'Workspace' (Overview, Customers / CRM, Catalog, PI, Sales, Quotes, Orders, Billing, Finance, HR, Reports) and 'Admin' (Settings, Users / Members, Roles & Permissions, Branches, Departments, Environments, Integrations, Audit Logs, Platform Products). The main content area has a top bar with 'Production', '+ Create', and a user profile. Below this, the 'Business workflows' title is followed by a subtitle: 'Review live business records through the same controlled services used by your team.' An 'Overview' tab is active. The interface features eight review cards, each with a 'Run review' button: 'Business overview' (Review activity across your workspace), 'Sales pipeline' (Review opportunities by stage), 'Quotes to review' (Find quotations that need attention), 'Revenue report' (Review recorded revenue), 'Finance summary' (Review the last 30 days), 'Team headcount' (Review your team by department), and 'Business settings' (Review your operating policies). At the bottom, a 'Prepare an action' section prompts the user to 'Choose a quote, order, or invoice. Review the proposal before applying the action.' It includes input fields for 'Record type' (set to 'Quotes'), 'Search record number', 'Business record' (set to 'Choose a record'), and 'Action' (set to 'Choose an action'), followed by a 'Prepare review' button. A 'Your workflow history' section is partially visible at the very bottom.

Business workflows.

13 Inventory

/inventory

/inventory/stock

/inventory/locations

/inventory/movements

Stock levels, locations and stock movements for physical products. Confirming an order deducts stock. The low-stock threshold from Settings raises inventory alerts on the Overview.

1. Settings › Business capabilities: set **Business type** to "Product business" or "Services and products".
2. Add locations, then set stock levels per item.
3. Review movements after orders are confirmed.

The Workzap workspace is set to **Service business**, so Inventory is off. It is hidden from the sidebar, and even the Owner sees "You don't have access to inventory" on these pages and on the inventory report.

14 Settings & administration

[/settings](#)[/settings/members](#)[/settings/roles](#)[/settings/branches](#)[/settings/departments](#)[/settings/environments](#)[/settings/integrations](#)[/settings/audit](#)[/settings/products](#)

Settings

Organization name. Business type. Default currency (ISO code) and tax rate. Auto-invoice on order confirm. Invoice due days. Low-stock threshold. Quote validity, maximum discount and approval threshold. Press **Save settings**. Light/Dark appearance is saved on this device only.

Members and roles

Members › **Add member** invites a person. Each row's actions menu changes roles or removes the person. Roles › **New role**: name, key and description, then tick permissions per module. "Select all" is available for each of Overview, Customers, Catalog, Inventory, Sales, Quotes, Orders, Billing, Finance, HR, Reports, PI, Administration and Integrations. **Permission matrix** compares all roles.

Branches, departments, environments

Create branches, then departments inside them. Environments keep Production data apart from test data. Use **New environment**, **Rename** or **Archive**, and switch between them with the pill in the top bar.

Integrations

The directory covers messaging (WhatsApp), email (Resend, SMTP, SendGrid), storage (S3), payments (Stripe), calendar (Google, Outlook), accounting (QuickBooks, Xero), commerce (Shopify, WooCommerce), collaboration (Slack, Teams), automation (generic webhook) and identity (Google Workspace, Microsoft 365). Open one, press **Connect**, then **Test connection**. Other tools: **API keys**, outbound **Webhooks** (subscribe to events such as "invoice paid"), inbound events, sync jobs, failures and health.

Audit log and platform products

Audit log lists every action with actor, entity, outcome and request ID. Filter by outcome, entity or action prefix (e.g. order.). Platform products turns add-ons such as PI on for each environment.

Account & security

- Change password: current, new, confirm.
- **Sign out of all devices** ends every signed-in session.

Notifications

- All / Unread tabs. **Mark all read.**
- Opened from the bell in the top bar.

! Gaps found while using the platform

No page crashed and no API call failed on any of the 160 pages. These gaps make the flow harder for a real user to follow.

#	WHERE	WHAT HAPPENS	SUGGESTED FIX	IMPACT
1	Inventory pages and inventory report	The Owner sees "Your role doesn't include this permission". The real reason is that business type is Service.	Show "Inventory is off for service businesses" with a link to Settings › Business capabilities.	Medium
2	PI	WhatsApp is not connected and auto-reply is paused, so the AI module does nothing yet. The PI home only says "Connect WhatsApp".	Add a setup checklist on the PI home: connect number → knowledge ready → test run → enable auto-replies.	High
3	Overview › Needs attention	There are 10 draft orders to confirm, but only 1 order counts this month. Drafts are piling up.	Confirm or cancel old drafts. Consider bulk confirm on the Orders "Drafts" tab.	Medium
4	HR	There are 0 employees although departments and members exist. One onboarding link is still waiting.	Finish onboarding, or add existing staff directly so headcount reports are meaningful.	Low
5	Attachments on orders, invoices, customers	Upload is not available until S3 is connected.	Connect S3 storage in Integrations, or hide the Attachments panel until it is connected.	Low
6	Overview tiles	KPI tiles still showed loading placeholders about 6 seconds after sign-in on the first load.	Check how fast the dashboard summary endpoint responds.	Low
7	Setup order	New users are not guided to set up settings, catalog and customers before quoting. The quote wizard only says "Add them first".	Add a first-run checklist on the Overview that follows section A of this guide.	Medium
